

LFS - Incidence of Economic Short Time Work

■ Data Characteristics

■ Unit of measure used

Percentage

■ Population & Scope

■ Statistical population

This table contains the shares of economic short-time workers among total employment, the ratio of economic short-time workers and labour force, and the gender composition of economic short-time workers. Data are broken down by professional status - employees, total employment - by sex and standardised age groups (15-24, 25-54, 55+, total).

■ Geographic coverage

In order to facilitate analysis and comparisons over time, historical data for OECD members have been provided over as long a period as possible, often even before a country became a member of the Organisation. Information on the membership dates of all OECD countries can be found at OECD Ratification Dates.

- **OECD Ratification Dates**

■ Concepts & Classifications

■ Key statistical concept

For detailed information on labour force surveys for all countries please see the attached file : www.oecd.org/els/employmentpoliciesanddata/LFSNOTES_SOURCES.pdf

Economic short-time workers are according to national definitions.
