

LFS - Incidence of marginally attached workers

■ Data Characteristics

■ Unit of measure used

Percentage

■ Population & Scope

■ Geographic coverage

In order to facilitate analysis and comparisons over time, historical data for OECD members have been provided over as long a period as possible, often even before a country became a member of the Organisation. Information on the membership dates of all OECD countries can be found at OECD Ratification Dates.

- **OECD Ratification Dates**

■ Population coverage

This table contains data on marginally attached workers as a percentage of the labour force and as a percentage of the population by sex and standardised age groups (15-24, 15-64, 25-54, 55-64, 65+, total).

Marginally attached are persons aged 15 and over, neither employed, nor actively looking for work, but are willing/desire to work and are available for taking a job during the survey reference week. Additionally, when this applies, they have looked for work during the past 12 months.

■ Concepts & Classifications

■ Key statistical concept
